1. Description and Tools in the case attention Console

Header Basic case data.

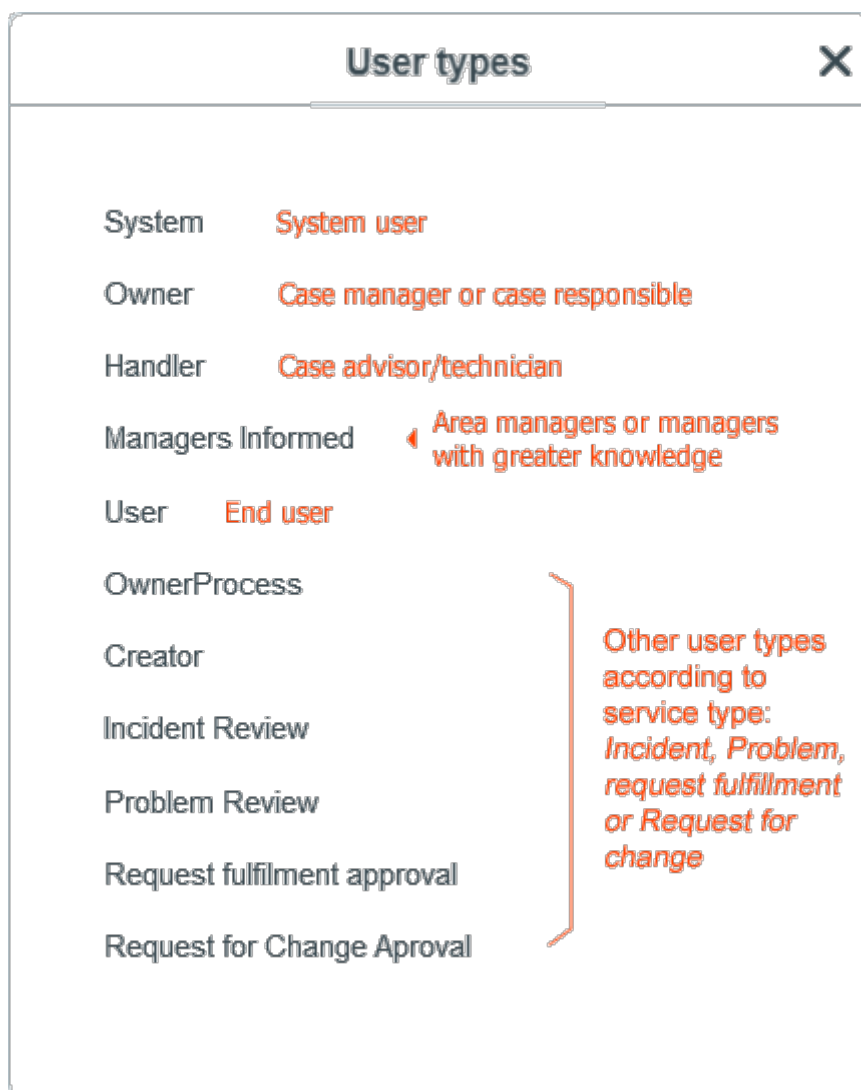

- **Case number and assigned priority.** ¹⁾
- **CAT Date:** Creation case date.

- **Title:** General subject of the case.
- **Detail:** Description of the case. By placing the mouse pointer near the detail field, buttons will be displayed to open a subwindow with all the content included in the description.

- **Current status of the case.** See Case Status (detail)
×
- **User.** User assigned to the case or the user that created the case.
- **Type of advisor attending the case:** Handler, Owner, Manager Informed. User Type
×

User Type

- **Case type:** Incident, Problem, Request fulfillment, Request for Change .
- **Service category.**

2

Case attention tools (Home tab)

- **Maximum remaining time:** Remaining and maximum estimated time calculated from the case creation date and maximum case solution time according to SLA/Model and configured schedules.
- **Information:**
 - **Guide:** Click on **Guide** button, to display the model guide, click on **Accept** to return to console view. See Guide tool

x

Click to open
model guide

The screenshot shows the LeverIT console interface. At the top, there is a header bar with the LeverIT logo, a user profile icon labeled 'UsrSrvDsk2', and a power icon. Below the header, the 'Title' field contains 'General Incident'. The 'Guide' section displays a text box with the following content:

This Incident record was created because it was identified at a very early stage even before it impacts a user or it was identified by the impacted user reporting it to the service desk. To recover service:

1. Investigate the incident, the advisor may rely on the knowledge base first or known errors for diagnosis and or resolution.
2. Initially, the service desk advisor attempts to resolve the Incident. However, if the service desk is unable to provide resolution, the Incident is escalated to the appropriate level of support, possibly involving higher levels of technical support staff who possess the skills to resolve the Incident.
3. Once resolved, the solution can be implemented and tested to confirm service recovery. A user satisfaction survey is utilized to determine overall satisfaction with their service delivery.
4. Following confirmation that the Incident has been resolved, the Incident can be closed. The service desk technician should ensure that the initial classification details are accurate for future reference and reporting.

At the bottom of the guide section, there is an 'Accept' button with a green checkmark icon.

- **Case:** Click on **Case** button, it will open a window that includes 3 tabs: General information of the case, users/user type assigned to the case and graphic of the service model/user groups (by type). See Case tool
- x
- **Category:** Tool to modify the category, SLA (according to category and other criteria), priority, title, description. These changes can be made in the same model or by changing the case model.
[See Category tool](#)
- **Workaround:** Tool to show the alternative solution(s) according to the category of the case. See Workaround tool (Knowledge base usage)
- x
- **End User info:** User notification(s) method(s).
- **Escalation:** Tools to escalate the case in a functional or hierarchical way: See Escalation tool
- x
- **Status:** Tool to change the current status of the case. How to change case status
- x
- **Link:** Tools to link to the current case: **Files, CIs, other cases.**
See How to use CI tool

x

See How to use Attach file tool

x

See How to use Related cases tool

x

3 Actions panel

- **Attention:** In this field enter the actions according to the current step of the case.
- **Messages:** Allows sending messages to users(end user, owner, manager, etc.) related to the case.

4 Service Model Steps

Flow of case attention through steps designed in the service model. Besides the case form, additional forms and fields can be configured according to the model type. When enabled, these forms and fields will be displayed after the model steps.

5 Additional forms

Besides the case form, additional forms and fields can be configured according to the model type. When enabled, these forms and fields will be displayed after the model steps.

6 Button(s) to change step and current step help.

2. Problem source and case detailed data

To display detailed case information click on **Case** button, it will open a window that includes 3 tabs: General information of the case, users/user type assigned to the case and graphic of the service model/user groups (by type). See Case tool

To edit permissions of the files

4.8 How to link cases

See How to use link cases

✕

1. Click on the **Related Cases** button to open the window to edit relationships.
2. To add one or more related cases, click on the Add button to open the *Link case* window.
3. Select Case to link: Click on to open the *Advanced search*
 1. Search filtering by *case number, category, category name, status, model, SLA, etc.*
 2. Or select a case from the full list.
4. After the case selection:
 1. Category will be autocompleted and fill in the fields:
 2. **Relationship type**: to define the type of relationship.
 3. Enter the **Title(Subject) and Description** of the relationship between cases.

Relationship Type	Description
Unknown relation	There is no direct relationship between the cases, but they may share similarities that allow them to be related. * This type of relationship is used just for information purposes.
This case is part of	There is a relationship between the cases, although the related case is not caused by the main case.
This case is the result of	The (related) case is caused by the main case. Example: Due to network problems (main case), a user does not have access to his email (related case).

5. Add/Edit parent-child relationships

See How add/delete parent-child relationships

×

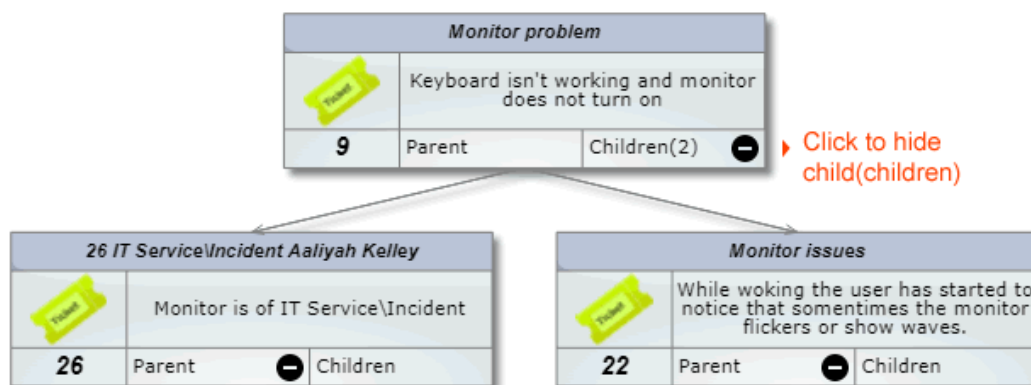

1. In the case attention window go to **Same Cases** tab.
2. Click on the **Add** button, the window to *add parent relationship* will open:

Search for a case by criteria such as: *Case number, title, description, model, category, etc.*
Or select from the complete list of cases (Show all).
Select a record and click on the **Use selected record** button.

3. After adding the relationship, it can be graphed by clicking on the icon

Parent case
(2 children related)

* Click on each case to display its basic info below the relationship graph

6. Activities

ITHelpCenter is based on activities and service models, in those: steps, working groups, attention time, escalation type, possible results, among others are defined. While a new case is being created, ITHC automatically decides which model and SLA will be assigned according to defined rules. In the case attention window go to **Activities** tab:

- See [Create a new RFC record from a problem](#)

7. Change Step

After investigation, diagnosis and other tasks such as creating known error or workaround records for the current step an advisor may change step.

Example

To change from **Creation of Known Error and Workaround** to **Solution Implementation**

20/07/2021

UsrPbm2

Attention for Creation of Known Error and Workaround
 It were created Known error and workaround records related to printers model PR890

10:13...

Investigation and Diagnosis

Creation of Known Error and Workaround

Solution Implementation

Review

Known Error Record

Workaround Record

Change to the new step:

Once the Known Error and Workaround records are created, click on the **Solution Implementation** button (Next step)

Solution Implementation

In this step, the solution can be implemented and must be tested to confirm service recovery. However, if a normal change was required, an associated Request For Change (RFC) will be raised and approved before a resolution is applied to the Problem.

[See Create a new RFC record from a problem](#)

Important

- Actions, executed tasks and messages are registered in the action log, see *Actions panel*.
- When the user determines that the case is resolved, the case new status will be **Resolved**.

Case Status and how to change it
x

8. Closing case

In this step, the case owner reviews the solution and authorizes case closure.

A case can only be closed when the case is already in the last step of the model, where the **Closed** option will be available in the status drop-down field.

Optionally enter a closing comment and select from the list a *result* and *cost* of the solution.

Finally click on the **Change Status** button, a message will be displayed indicating if the category, priority, urgency (Is Major) of the case was verified before closing, when the **OK** button is clicked the status will change to **Closed**. [See Category tool](#)

Did you verify that all the final data of the record is correct? (i.e: Category, Priority, is major)

OK Cancel

When the OK button is clicked the status will change to **Closed**

New status Closed

OK

To change status to **Closed**:

Change Status (Current:Resolved)

New status

Closed

Change Status Description

Result: Ok_software

Return cost: 0

Change Status ✓

1)

Assigned priority is the result of the calculation of urgency and impact
